

Apply Further transformations

Version 1.0.1, by Giorgio Bianchini

Description: Applies the actions performed by the Further transformation modules.

Module type: MenuAction

Module ID: 9b49587c-3d02-4fbe-859f-feed56dca92d

This module definitively applies the actions performed by the current Transformer and Further transformation modules. This discards the information about the tree(s) that were originally loaded from the tree file. For example, if the tree file contained 1000 trees, the Transformer module computed the consensus tree out of them, and Further transformation modules were used to add attributes to the tree, using this module will discard the 1000 trees and the Further transformation modules, only keeping the final transformed tree with the new attributes.

The tree will be opened in a new window and you will have the option of keeping the window with the original tree open or closing it. The Coordinates and Plot action modules will be applied to the new tree as well.
