

Export PDF

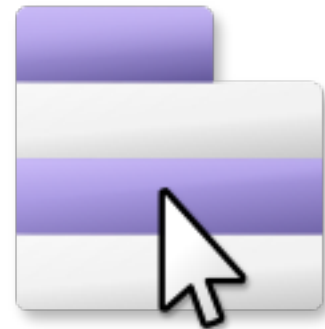

Version 1.0.0, by Giorgio Bianchini

Description: Exports the tree plot as a PDF document.

Module type: MenuAction

Module ID: f26d503e-52aa-46fe-afb7-68d662b4de2e

This module is used to export the tree plot in PDF format.

Parameters

Maximum PDF page size

Global setting

Control type: Number spin box

Default value: 10000

Range: [1, $+\infty$)

This global settings determined the maximum page width and height for exported PDF document. If the tree plot is larger than this, it is scaled so that it fits in a square of this size. This is necessary because the standard PDF format imposes a 200x200 inch limit (14'400 units) on the page size, and pages larger than this may not be visualised correctly in some viewers. Except in rare instances when some numerical underflow may occur, using a smaller page size should not cause any discernible difference in the actual drawing. The value can be changed from the global settings window accessible from Edit > Preferences...
