Rooted tree style

Version 1.0.1, by Giorgio Bianchini

Description: Sets the plot actions to display the tree as a rooted tree.

Module type: Action

Module ID: `e56b8297-4417-4494-9369-cbe9e5d25397`

This module is used to apply to the currently opened tree the styles necessary to draw it in a "Rooted" ("Rectangular") style.

The module will enable *Rectangular* Coordinates module, the *Branches* module (setting it up to draw the branches in a rectangular style) and two instances of the *Labels* module, one showing the tip labels and one showing branch lengths in the middle of branches. The current Coordinates module will be replaced, and all Plot actions will be removed.

Further information

Here is an example of a tree drawn with the style that results from applying this Action module:
